

Installation ME146 cab conversion (V2.1) for RS Italia BR185

SBB Re 482 repaintpack

This software will create 6 extra versions of the SBB Re 482 loco's adding the cab of RSC's ME146 (Metronom), replacing the BR101 cab. Please remember to check (activate) all needed providers in the scenario editor.

- *RSItalia (BR185_pack)*
- *PMdesign (Railvehicles)*
- *Kuju assets (Railsimulator) for the couplers*
- *RSC ME146 (ClassME146Pack01)*

Not doing so will result in the engines not showing in the list or in a system crash when coupling wagons.

Prerequisites:

You must have the CreativeworX (PMdesign) Re 482 repaint pack installed on your system!

First Install:

1. Unpack the .zip file (RE482_SBB_ME146Cab_Pack_V2.zip)
2. Install the .rwp file (RE482_SBB_ME146Cab_Pack_V2.rwp) using the TS Utilities package installer

Update:

1. Delete the old files by
 - a) doing an 'uninstall' in the package manager (TS Utilities) or
 - b) manually deleting the 4 Re482 folders in
..\railworks\Assets\PMdesign\Railsimulator\RailVehicles\Locomotives\Electric\BR185_PACK\
Default\Engine\..
2. Install the .rwp with the new Version 2 files as mentioned above (First Install)

Donations via the website are always appreciated!

Paul Mersel,
